

Paperless Factory

The CIMA paperless factory solution centralizes the control of all detailed documents applicable to each routing. Our solution aligns with industry business processes and is designed to integrate with enterprise resource planning systems.

- Manage critical supporting documents for each routing part number
- Provide electronic access to documents from the shop floor
- Email alerts for critical events
- Generate management reports and metrics

Key Features

- Link work instructions, safety bulletins, drawings, operation sketches, etc to routing operations
- Provide shop floor visibility to external and internal requirements
- Mass update of routings when document revisions impact the shop floor
- Reduce or eliminate hard copy shop floor packages
- Copy supporting documentation from a routing to another part
- Sign off profile of routing revisions (optional)

Automatic Electronic Notification of Key Events and Activities

- New routings that require review and update
- Electronic approval of new routings and revisions (optional)
- Notice of revision for work instructions, safety bulletins, drawings, operation sketches, etc
